Test Case of an OTP:

1. Check the OTP input Field.
2. Check whether the correct OTP is generated or not.
3. Check whether the generated OTP is valid from one time or not.
4. Check the OTP code is only numeric.
5. Check the OTP is delivered to the requested user within time.
6. Check the user received the OTP code sent by registered email or phone number.
7. Check if the incorrect OTP is rejected.
8. Check the OTP doesn't accept unique characters.
9. Check the application accepts the code successfully with the OTP provided.
10. Check if the user can log in with the expired OTP.
11. Check whether entering the invalid OTP after the error info message or not.
12. Check the limit set for the OTP code to resend multiple times or not.
13. Check if there is any pause time to resend the OTP again.
